This tutorial will help you to search for articles in the JSTOR database. To begin, we’ll visit the library homepage.
From the library homepage, select “Databases.”
• **Select the database title, “JSTOR,” from the list.** *JSTOR covers a large number of disciplines and is an archival database, meaning that it does not carry current editions of journals.*

• **Clicking on the database title will take us to the general JSTOR search screen.**
• From the middle of the page, we’ll select the “Advanced Search” option.
• Type your topic in the search box.
• Uncheck the box labeled “Include links to external content.” Doing so ensures that we only receive articles that we have full access to.
• Click the blue “Search” button.
Here on the results page, the sample search has retrieved 22 articles.
Thanks for using the One-Minute Mentor tutorial series!
